Fields Demand Strength. So We Sell Zimmatic Tough. Durable. Field Proven

Uneven terrain, unpredictable weather and extreme growing conditions – it's all in a day's work for Zimmatic. Built to stand up to anything your fields can dish out – day after day, season after season. With features you won't find in any other pivot irrigation system, like the industry's most durable drivetrain, the exclusive Uni-knuckle span connector and precision technology. So you can grow in more areas, more confidently with the field proven strength of Zimmatic

Annual Recommended Maintenance Schedule

Regular maintenance of your pivots involves checking several key components and making any necessary repairs or replacements. Key inspection points include:

- Lubrication
- Electrical components
- Drive train and tyres
- Sprinkler package efficiency

Benefits of Regular Pivot Maintenance

Scheduling annual maintenance appointments for your pivots will assure a longer, more reliable life for your pivots – and more productive growing seasons for you. The benefits of regular maintenance include:

- Less downtime
- Lower operating costs
- Longer pivot life
- Higher trade-in value
- Better return on investment

Maintenance Tip of the Month

Tyre pressure on centre pivots and lateral move irrigators need to be set at 24-26psi. Optimum tyre pressure ensures that your irrigator can deal with all terrains and move smoothly across the field. When tyre pressures are low, damage can occur to the tyre and its rim, and irrigators can shut down due to an alignment problem.

TEAM Irrigation can service any pivot – no matter what brand.

Thinking of buying a new tank?

The NSW Rainwater Tank Rebate ends
30 June 2009.
